
Clinical Care and Management Innovation Research Area

**PERINATAL EPIDEMIOLOGY AND FOLLOW-UP OF HIGH RISK INFANTS
RESEARCH GROUP**

We invite applications for 1 research position in the area of perinatal epidemiology and follow-up of high-risk infants, within the research group led by Dr. Marina Cuttini.

The position involves activities of data management, statistical analysis and preparation of research papers in relation with two European projects:

1. SHIPS (Screening for Health In very Preterm infantS in Europe, see www.epiceproject.eu)
2. ReCAP (Research in Children and Adults born very Preterm, see <https://recap-preterm.eu/>)

and will offer the exciting opportunity to work in collaboration with the wide international group of epidemiologists, clinicians and statisticians taking part in these projects.

The successful candidate will have a statistical background with excellent data management and analyses skills. A good knowledge of written and spoken English is required. Experience or interest in maternal and child health will be a plus.

A degree in Statistics or comparable diploma is required. Additional diplomas at Master and PhD level, as well as study or working experiences abroad, will represent important advantage titles. Position and salary will depend on qualifications and experience.

The review of applications will start immediately and will continue until the position is filled.

The applications, including the candidate's CV and the name and address of 2 reference persons, should be submitted to direzione.scientifica@opbg.net, quoting the code OPBG2018/02

For further information, please contact Dr Marina Cuttini (marina.cuttini@opbg.net).
